HRUTHIK SUDI PEDDOLLA

+91 8143141487 | hruthikpeddolla@gmail.com | LinkedIn | GitHub

Summary

Computer Science and Engineering undergraduate with training in Java Full Stack Development and knowledge of Core Java, SQL, RESTful APIs, CRUD operations, and database technologies. Strong understanding of OOP, backend development, authentication, and frontend technologies. Familiar with MySQL, PostgreSQL, HTML, CSS, and JavaScript. Interested in backend and full-stack software development.

Education

Guru Nanak Institute of Technology 2023 – 2027
B.Tech in Computer Science and Engineering *CGPA: 7.91*

NRI Junior College 2021 – 2023
Intermediate – MPC *Percentage: 92.9%*

Brilliant High School 2020 – 2021
SSC *GPA: 10.0*

Technical Skills

Full Stack Development: Java Full Stack Development

Programming Languages: Java (Core Java), SQL

Frontend Development: HTML, CSS, JavaScript

Backend Development: RESTful APIs, CRUD Operations, JWT Authentication, Role-Based Access Control (RBAC), Dependency Injection (DI), Inversion of Control (IoC), DTO, Bean Validation, Exception Handling

Database: MySQL, PostgreSQL

Developer Tools: Git, GitHub, IntelliJ IDEA, Visual Studio Code, Eclipse

Core Concepts: Object-Oriented Programming (OOP)

Soft Skills: Problem Solving, Communication, Teamwork, Adaptability

Projects

Simple Weather Dashboard using OpenWeatherMap API | *Python, Flask, HTML, CSS, JavaScript*

- Developed a web-based Weather Dashboard using Flask and the OpenWeatherMap API to display real-time temperature, humidity, and weather conditions for user-specified cities.
- Integrated the OpenWeatherMap API with the Flask backend to retrieve weather data and process user requests efficiently.
- Implemented dynamic UI rendering using HTML, CSS, JavaScript, and Python to display updated weather information based on the selected city.
- Designed a simple and responsive interface to present weather details in a clear and user-friendly format.
- Connected frontend components with backend API functionality to create an interactive weather information system.
- Gained practical experience in REST-style API integration, backend development, frontend development, and real-time data retrieval.

Smart Helmet for Accident Detection | *IoT, Sensors, Communication Technology*

- Developed a smart safety system designed primarily for bike riders to improve rider safety and support emergency response.
- Used sensors and communication technology to detect accident situations automatically.
- Designed the system to identify potential accident events and initiate an emergency alert process.
- Focused on providing timely accident information to support faster emergency response after a potential accident.
- Applied IoT, sensing, and communication concepts to address a real-world road safety problem.
- The project demonstrates the practical application of technology to improve safety for two-wheeler riders.
